
MegaPath's Managed Security for Restaurants

MegaPath is the leading provider of network solutions for restaurants. By combining a PCI-compliant MPLS network with the largest national footprint available, we provide every restaurant location with a high-speed Virtual Private Network (VPN). This gives you secure access to corporate applications and real-time communication between your restaurants, no matter where they're located. Our converged MPLS service uses this private network to deliver voice and data over one high speed connection and we offer comprehensive optional security, failover and mobility services. The result is improved performance and reduced costs at every restaurant location.

Cost Effective Multi-Site Network Solutions

Do-it-yourself solutions are complicated and time-consuming. MegaPath's Hosted Voice with MPLS and Managed Security service is a hassle-free managed network solution. From the minute your service is up and running, our Network Operations Center (NOC) technicians proactively monitor your connections and equipment. If there's ever an issue, we diagnose and resolve it quickly to minimize any service impact. We repair or replace any non-operational equipment on-site and, to demonstrate our commitment, we guarantee the performance of our service with a comprehensive set of end-to-end Service Level Agreements (SLAs).

MegaPath Managed Restaurant Solutions include the following:

- **Broadband Connectivity**

MegaPath offers the widest broadband options available today, including ADSL, SDSL, T1, wireless, cable, DS3, Ethernet, and satellite.

- **MPLS VPN**

MegaPath MPLS VPN enables retail locations to securely communicate with headquarters and any other necessary locations.

- **Converged Voice and Data**

MegaPath Hosted Voice + MPLS service enables customers to replace costly phone lines with one converged high speed connection which handles both the retail VPN network and voice service. This service is compatible with analog, PBX and IP-PBX phone systems, so there's no new equipment to buy. And, it includes business calling features and QoS prioritization to guarantee voice quality, and a single bill for both voice and data.

- **Managed Security Services**

MegaPath offers a full-suite of hosted Managed Security Services that promote PCI compliance without the need to purchase any additional hardware. This integrated, multi-layered security approach protects your network around the clock. And, a Virtual IP Service enables secure remote access to your video surveillance system to help you protect your business.

- **Payment Processor Services**

The MegaPath Payment Processor Extranet service provides retailers with a PCI compliant private network connection to a wide variety of Payment Processors covering credit/debit/gift cards and other financial transactions.

- Failover Connectivity

Minimize business impact due to unexpected broadband outages. Dial-up and wireless backup enable reliable payment processing and ensure applications run at broadband rates during times of primary network outages.

- Managed WiFi HotSpots

Get a competitive edge by providing public Internet access to your customers. Multiple authentication options give you the flexibility to choose how you want your diners to access the network.

- Managed Wireless Local Area Network (WLAN)

MegaPath WLAN service enables private wireless access to all of your LAN and WAN resources from any wireless device, including hand-held point-of-sale systems and laptops.

- Video Surveillance

MegaPath Managed Solutions for Retailers support a wide range of video surveillance systems to give you remote access to high-quality images at your business locations.
